# **CS Bridge Module 13 Searching**

# 1. Searching

## 1.1 CS Bridge: Searching

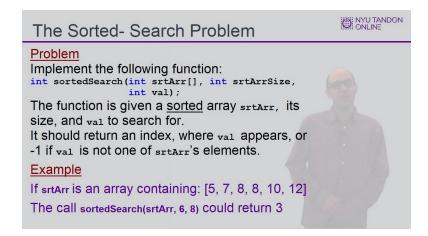

### 1.2 The Searching Problem

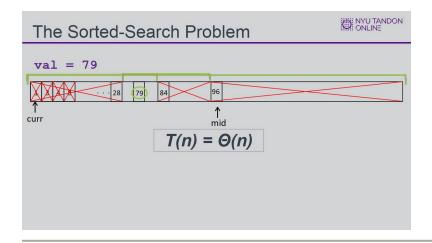

### 1.3 Searching Code Sample

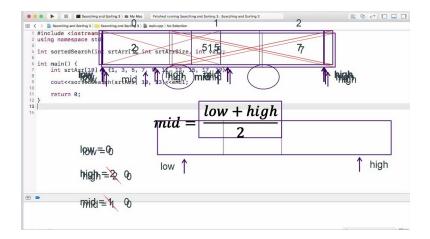

#### 1.4 The Sorted-Search Problem

#### 1.5 The Sorted-Search Problem

### 1.6 Sorted Search Implementation

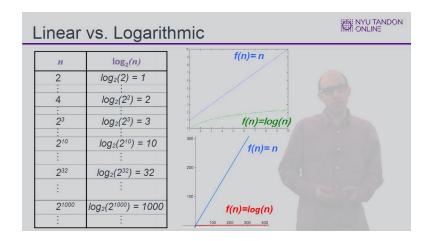

### 1.7 Implementation

```
int sortedSearch(int srtArr[], int srtArrSize, int val){
                                                                                                          NYU TANDON
ONLINE
              int low, high, mid;
              int ind;
bool found;
              low = 0;
             high = srtArrSize - 1;
found = false;
    Θ(1)
              while((found == false) && (low <= high)){
    mid = (low + high) / 2;
    if (srtArr[mid] == val){</pre>
                        found = true;
iterations) \Theta(1)
                   else if (val < srtArr[mid])
                   high = mid - 1;
else // val > srtArr[mid]
                       low = mid + 1;
              if(found == true)
                   return ind;
    Θ(1)
                   return -1;
```

#### 1.8 The Sorted-Search Problem

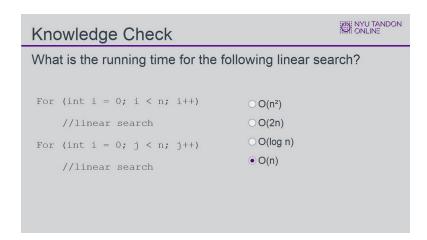

```
int sortedSearch(int srtArr[], int srtArrSize, int val){
                                                                                                 NYU TANDON
ONLINE
            int low, high, mid;
   Τ
            int ind;
            bool found;
   Ite
            high = srtArrSize - 1;
found = false;
   P(1)
             while ((found == false) && (low <= high)) {
    mid = (low + high) / 2;</pre>
                 if (srtArr[mid] == val) {
                      ind = mid;
                      found = true;
Θ(# of terations) Θ(1)
                 else if (val < srtArr[mid])</pre>
                 high = mid - 1;
else // val > srtArr[mid]
            if(found == true)
   Θ(1)
                                           T(n) = \Theta(\log_2 n)
                 return -1;
```

## 1.9 Linear vs Logarithmic

## 1.10 Knowledge Check

(Multiple Choice, 10 points, 5 attempts permitted)

Correct	Choice
	O(n²)
	O(2n)
	O(log n)
Х	O(n)

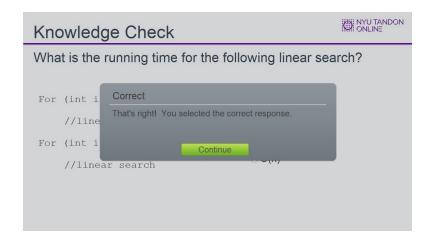

#### Feedback when correct:

That's right! You selected the correct response.

#### Feedback when incorrect:

You did not select the correct response.

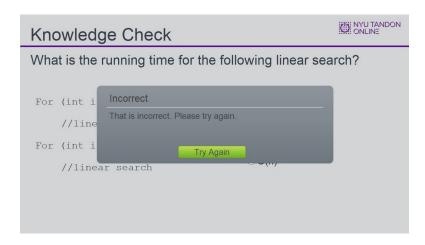

### **Correct (Slide Layer)**

### **Incorrect (Slide Layer)**

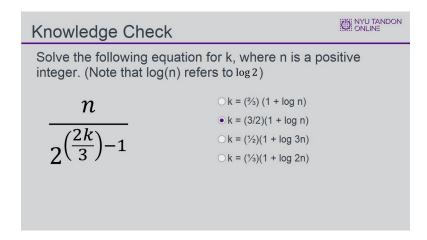

### Try Again (Slide Layer)

## 1.11 Knowledge Check

(Multiple Choice, 10 points, 4 attempts permitted)

Correct	Choice
	k = (¾) (1 + log n)
Х	k = (3/2)(1 + log n)
	$k = (\frac{1}{2})(1 + \log 3n)$
	k = (1/3)(1 + log 2n)

#### Feedback when correct:

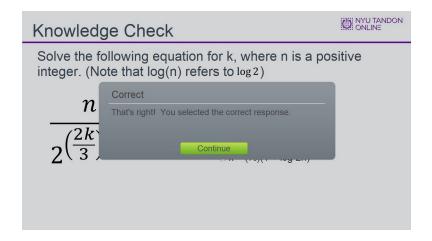

That's right! You selected the correct response.

#### Feedback when incorrect:

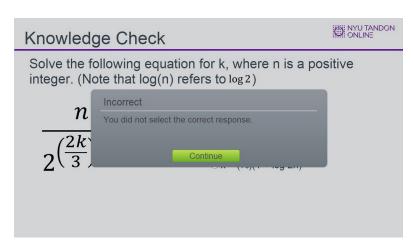

You did not select the correct response.

#### **Notes:**

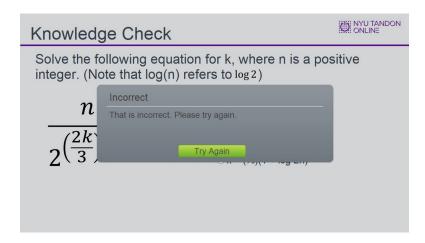

### **Correct (Slide Layer)**

# **Incorrect (Slide Layer)**

# Try Again (Slide Layer)

## 1.12 End of Module
